

Scanning Solution for e-Synergy

Would you like the capability to scan directly into Exact's e-Synergy?

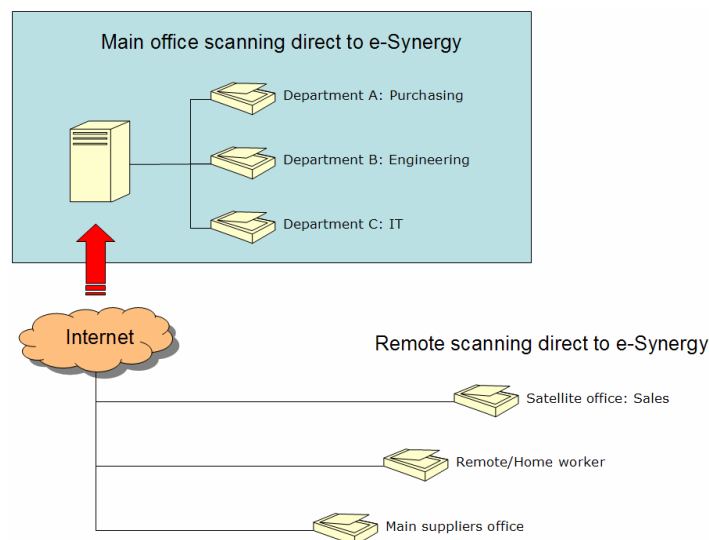

A solution which is:

- Cost effective?
- Flexible and easy to use?
- Works with most budget scanners?
- Multi-site or single-site?

Until now scanning directly into e-Synergy required a significant investment in high-end scanning equipment. The alternative for e-Synergy users is a convoluted process of transferring from scanner, to desktop PCs to server. Not any more!

Isosceles have produced a software solution to provide direct scanning into e-Synergy.

e-Synergy provides a web-based information management system which provides knowledge-sharing and open communication, as well as a centralised database of all company information. The ability to remotely and centrally scan documents directly into e-Synergy is therefore vital in order to get the full benefit from the e-Synergy system.

Furthermore the solution can incorporate the automatic creation of a 'workflow' request for someone's attention, notifying them of the upload, with a link to the imported document. This ensures documents are acted upon immediately.
